SUMMARY

Bioinformatics graduate with hands-on experience building and deploying AI systems in healthcare. Developed three end-to-end applications – two live on the Google Play Store and one in closed testing – spanning medical imaging, snake species identification, and respiratory disease detection. Co-author of a research paper submitted to *Brain Imaging and Behavior* (Springer Nature). Holder of a confirmed offer of admission to the MSc Health Data Science programme at the University of Galway, commencing September 2026.

EDUCATION

B.Tech in Bioinformatics Oct 2022 – Jun 2026
SASTRA Deemed University Thanjavur, India
CGPA: 7.90 / 10. Final years focused on deep learning, medical imaging, and applied machine learning.

FUTURE STUDY

MSc in Health Data Science Galway, Ireland
University of Galway
Confirmed Offer of Admission – September 2026 Intake

PUBLICATION

Co-Author – *Brain Age Gap Technology: A Transfer Learning-Based Multi-Task Deep Learning Framework for Simultaneous Brain Age Estimation and Alzheimer’s Disease Classification from Structural MRI*
Brain Imaging and Behavior (Springer Nature)
Manuscript submitted to *Brain Imaging and Behavior* (Springer Nature), July 2026.

KEY PROJECTS

NeuroAge – Brain Age Estimation for Alzheimer’s Research — *Closed Testing on Google Play*
PyTorch • Medical Imaging • Deep Learning • Android

- Built a multi-task AI pipeline to estimate biological brain age from brain scan images, covering disease classification, age regression, and gap analysis on a large clinical neuroimaging dataset.
- Deployed via Hugging Face with an Android app in closed testing on Google Play; co-author of a paper submitted to *Brain Imaging and Behavior* (Springer Nature).

Slitherin – Indian Snake Species Classifier — *Live on Google Play Store*
Computer Vision • TensorFlow • Hugging Face • Android • Kotlin

- Built an image recognition system to classify 14 Indian snake species from smartphone photos, helping users identify venomous snakes for faster and safer first-aid decisions.
- Shipped a multilingual Android application (English, Tamil, Telugu, Hindi), live on the Google Play Store and used by the public.

Safe Breath – Respiratory Disease Classifier — *Live on Google Play Store*
Audio Processing • Ensemble ML • Flask REST API • Android • Kotlin

- Built a machine learning system to classify respiratory diseases from digital stethoscope audio, designed for primary care settings where specialist access is limited.
- Deployed as a REST API integrated into an Android application – live on the Google Play Store.

PROFESSIONAL EXPERIENCE

AI / ML Intern Jun 2024 – Oct 2024
Learnflu (AICTE) Remote, India

- Built supervised machine learning models on real-world datasets using Python and scikit-learn, applying feature engineering to improve predictive reliability.
- Evaluated model performance with standard metrics (precision, recall, F1-score, accuracy) and selected optimal models per use case.

TECHNICAL SKILLS

Languages	Python, SQL, HTML, CSS
ML / AI	Deep Learning, Computer Vision, Transfer Learning, Ensemble Methods, Medical Imaging AI, Audio Signal Processing
Frameworks	PyTorch, TensorFlow, Keras, Scikit-learn
Data	Pandas, NumPy, Feature Engineering, Class Imbalance Handling
Deployment	Flask, Hugging Face Spaces, Android / Kotlin, Linux
Domain	Healthcare AI, Bioinformatics, Medical Imaging, Clinical Decision Support

CERTIFICATIONS

Generative AI and Prompt Engineering – HCLTech	2025
AI Course and Internship – AICTE Learnflu	2024
Python Programming and SQL Fundamentals – HackerRank	2024
