ACADEMIC PROFILE

Bioinformatics graduate (B.Tech, 2026) applying for MSc Data Science programmes in Scotland. Motivated to deepen my knowledge of statistics, machine learning and large-scale data analysis, and to apply them to healthcare and life-science problems. Built three end-to-end applied ML projects spanning medical imaging, species identification and respiratory sound analysis, from data preparation and model evaluation through to deployment: two are live on the Google Play Store and one is in closed testing. Completed an AI/ML internship working with supervised learning on real-world datasets.

EDUCATION

B.Tech in Bioinformatics

SASTRA Deemed University

CGPA: 7.90 / 10

Oct 2022 – Jun 2026

Thanjavur, India

PROJECTS

NeuroAge – Brain Age Estimation for Alzheimer’s Research / *Closed Testing on Google Play*

PyTorch • Transfer Learning • Medical Imaging • Deep Learning • Android

- Built a multi-task deep learning pipeline to estimate biological brain age from structural MRI scans, covering Alzheimer’s disease classification, age regression and brain age gap analysis on a large clinical neuroimaging dataset.
- Deployed the model through Hugging Face and developed an Android application, currently in closed testing on Google Play.

Slitherin – Indian Snake Species Classifier / *Live on Google Play Store*

Computer Vision • TensorFlow • Hugging Face • Android • Kotlin

- Built an image classification system to identify 14 Indian snake species from smartphone photos, helping users recognise venomous snakes to support faster and safer first-aid decisions.
- Developed a multilingual Android application (English, Tamil, Telugu, Hindi), live on the Google Play Store and used by the public.

Safe Breath – Respiratory Disease Classifier / *Live on Google Play Store*

Audio Signal Processing • Ensemble ML • Flask REST API • Android • Kotlin

- Built a machine learning system to classify respiratory diseases from digital stethoscope audio, designed for primary care settings where specialist access is limited.
- Deployed the backend on Hugging Face and integrated it into an Android application, live on the Google Play Store.

PROFESSIONAL EXPERIENCE

AI / ML Intern

Learnflu (AICTE)

Jun 2024 – Oct 2024

Remote, India

- Built supervised machine learning models on real-world datasets using Python and scikit-learn, applying feature engineering to improve predictive reliability.
- Evaluated model performance using precision, recall, F1-score and accuracy, and selected the most suitable model for each use case.

TECHNICAL SKILLS

Languages Python, SQL, HTML, CSS

ML / AI Deep Learning, Computer Vision, Transfer Learning, Ensemble Methods, Medical Imaging AI, Audio Signal Processing

Frameworks PyTorch, TensorFlow, Keras, Scikit-learn

Data Pandas, NumPy, Feature Engineering, Class Imbalance Handling

Deployment Flask, Hugging Face Spaces, Android / Kotlin, Linux

Domain Healthcare AI, Bioinformatics, Medical Imaging, Clinical Decision Support

CERTIFICATIONS

Generative AI and Prompt Engineering – HCLTech

2025

AI Course and Internship – AICTE Learnflu

2024

Python Programming and SQL Fundamentals – HackerRank

2024
